Vision

A premier referral hospital renowned for excellence in clinical care, training, research and innovation.

Mission

To enhance the health and wellbeing of Kenyans and global citizens through provision of patient-centred and evidence-based healthcare.

Core Values

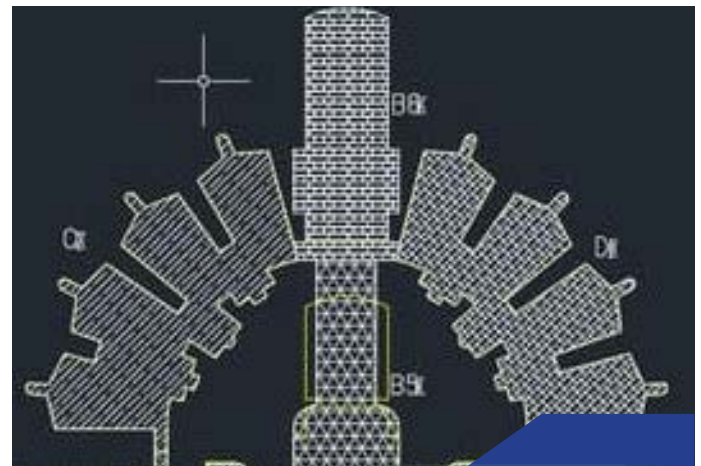

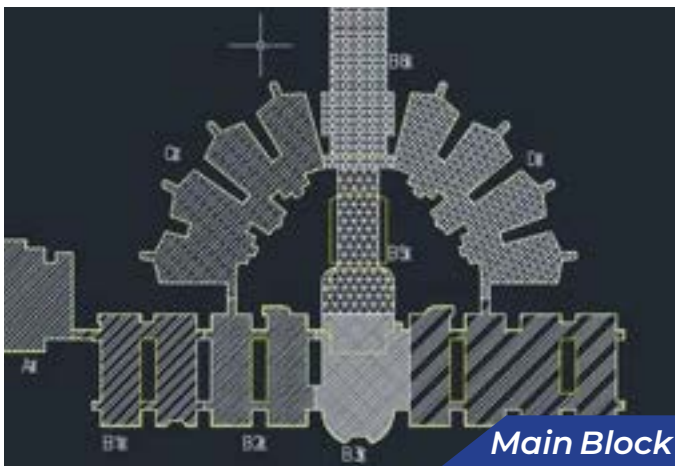

- **Integrity**
- **Teamwork**
- **Compassion**
- **Accountability**
- **Equity and Diversity**

Hospital Layout

Nine years ago, the land that this state of the art facility sits was an idle open field. Fast forward to the current date; stands an ultra-modern 650-bed capacity hospital that is transforming the lives of Kenyans.

The Hospital has 24 wards namely:

- | | |
|------------|--------------|
| 1. Limpopo | 13. Ngong |
| 2. Nile | 14. Mau |
| 3. Zambezi | 15. Karura |
| 4. Mara | 16. Aberdare |
| 5. Galana | 17. Lily |
| 6. Yala | 18. Lantana |
| 7. Tana | 19. Jasmine |
| 8. Athi | 20. Lilac |
| 9. Renal | 21. Flamingo |
| 10. Trauma | 22. Ostrich |
| 11. Cedar | 23. Pelican |
| 12. Olive | 24. Swan |

Specialised wards include:

1. Maternity
2. Intensive Care Unit (ICU)
3. High Dependency Unit (HDU)
4. Neonatal Intensive Care Unit (NICU)
5. Oncology Ward

Vision and Handover

About KUTRRH

Kenyatta University Teaching, Referral & Research Hospital (KUTRRH) is a leading National Referral Hospital with a 650-bed capacity and is equipped with state-of-the-art medical amenities. We are located on a 100-acre piece of land that lies in the Northwestern part of Kenyatta University, with the main entrance being along the Northern Bypass road.

Why the Hospital was created

Kenya is increasingly experiencing a massive demand for health services, which is caused by the growing population and emerging and re-emerging diseases. Consequently, there is congestion in public health facilities and a shortage of essential medical personnel.

The current doctor/patient ratio in Kenya is 1:6355, which is far below the WHO recommended ratio of 1:1000. There is also a shortage of specialized medical personnel. KUTRRH aims to:

- Provide adequate and quality health care for all, including highly specialized services.

- Train health care professionals for the local and regional market; facilitated by the state of the art technology such as teleconferencing.
- Reduce the outward flow of medical professionals and attract inbound medical tourism from countries within the Eastern African region and beyond.
- Address the current health challenges, including non-communicable diseases such as cancer, kidney disease, among others.

- Carry out medical/scientific research to come up with innovative ways to address health issues in the country and region.

By embracing innovative approaches, KUTRRH purposes to expand patient-centred health-care provision, research and training in Kenya and beyond. This includes addressing unique areas of research and service delivery such as Tele-conferencing, expand the Gender Violence Recovery Centre, the Geriatric/Ag-ing Centres and evidence-based clinical services.

Vision and Handover

Background

The Constitution of Kenya 2010 stipulates that every Kenyan has the right to access the best health services. As a result, the Government is committed to offering an effective healthcare system with quality patient-centred care. The Government has prioritized Universal Healthcare Coverage (UHC) and acknowledged the need for collaboration between the various sectors to achieve this dream.

In line with this, Kenyatta University Teaching, Referral & Research Hospital (KUTRRH) project was conceptualized in 2008. The Government of Kenya through various line Ministries and their Permanent Secretaries supported the idea developed by Kenyatta University Management led by the then Vice-Chancellor, Prof. Olive Mugenda. The idea came to fruition with the signing of an M.O.U on Thursday, 21st April 2011.

The signing was witnessed by the former President H.E. Mwai Kibaki at State House Nairobi. The then Minister of Finance Hon. Uhuru Kenyatta signed the M.O.U on behalf of the Government of Kenya and Mr Li Changchun, a member of the Standing Committee of the Communist Party of China signed on behalf of the People's Republic of China.

A concessional loan amounting to RMB Yuan 744,560,000 (Kshs. 9 Billion) was agreed upon and funded by the Export and Import Bank of China (EXIM Bank) towards Preparation Design, Development of Hospital Infrastructure, Equipment, Personnel and Capacity Building.

H.E Mwai Kibaki, C.G.H., the former President of Kenya at the official groundbreaking Ceremony of KUTRRH in the presence of H.E Kalonzo Musyoka, Former Vice President and Prof. Olive Mugenda, the then VC Kenyatta University.

H.E Uhuru Kenyatta, the former President of Kenya with Dr. Evans Kidero former Nairobi County Governor, and Prof. Olive Mugenda, the then VC Kenyatta University inspecting the Hospital construction progress in 2015.

Prof. Olive Mugenda, the then VC, Kenyatta University inspecting the progress of the hospital construction.

To facilitate operationalization, KUTRRH was made a State Corporation through the Legal Order No. 4 of January 2019. A Board of Directors was appointed in April 2019 under the leadership of Prof.

Olive Mugenda. The board has worked tirelessly to ensure that the Hospital is operational. Subsequent pages capture the milestones covered since the start of the facility.

Vision And Handover

Handover and Operationalisation

The following are some of the milestones:

a) Establishment of the taskforce: A task force was appointed by the Ministry of health to audit the assets of the Hospital and determine their state in readiness for the handover. The task force was headed by Dr Muraya from the Office of the Head of Public Service.

b) The handover: The contractor handed over the facility to the University, which in turn, handed over to the Hospital Board of Directors in May 2019.

c) Development of organizational structure and other governance tools

d) Advertisement and recruitment of staff for phase one in July 2019.

e) Dry run and soft run of the Hospital operations in September and October 2019

f) Opening of doors to the first patients in October 2019. The initial departments operationalized are Oncology, Accident & Emergency, Trauma & Orthopaedics, Renal, Laboratory, Diagnostic Imaging, Theatres, ICU, Funeral Home, and other support services such as kitchen, restaurants, laundry, and the central sterile services department (CSSD).

Prof. Olive Mugenda, KUTRRH Chairperson, receives Keys from Prof. Shem A. Migot, Kenyatta University Chairman of Council.

Prof. Olive Mugenda, KUTRRH Chairperson, and Prof Paul K. Wainaina, VC Kenyatta University, sign handover documents in the presence of other stakeholders.

Chairperson of the Board of Directors

“

KUTRRH was born out of the need to provide specialised medical care, training and research in one facility within Kenya.

Prof. Olive Mugenda, Ph.D., EBS, CBS
Chairperson, Board of Directors

Operationalisation of Kenyatta University Teaching, Referral and Research Hospital marked the culmination of a long journey of over ten years since this hospital project was conceptualised in 2008. I am proud to have led the team that came up with the concept and the proposal that led to the approval and funding for the project. It is very gratifying to witness the dream to deliver quality, and affordable specialised healthcare to Kenyans become actualised.

The Establishment of KUTRRH is in line with Kenya Vision 2030 Social Pillar, which states the desire of the Government to provide high quality and affordable healthcare to improve the quality of life for Kenyans. It is also in line with the Government's Big Four Agenda, which aims to achieve Universal Healthcare by the year 2022.

The idea of having a hospital was born out of the need to provide specialised medical care, training and research in one facility within Kenya. KUTRRH is the first one in the country to be established with facilities for medical care, medical training and research components. The Hospital will not only provide specialised healthcare but also offer a solution to the identified shortage in the

availability of medical personnel as well as facilities that can carry out medical research and innovation.

KUTRRH is also the first hospital in the country to operationalise the, purely, referral model. This means the Hospital does not receive walk-in patients, apart from emergency cases - who will be often stabilised and referred to level 4 or 5 hospitals. For this model to succeed, it calls for a concerted effort by all stakeholders. I want to appreciate the support we have received in this regard from the Government and other healthcare facilities.

As continue marking key milestones, I am happy to note that this is not the end of the journey but new beginnings. The KUTRRH Board of Directors, the Management and Staff are committed to delivering quality patient-centred-care and also to reverse the outbound medical tourism where Kenyans go abroad to seek medical care. It is with this in mind that the Hospital Board proposed to the Government for the approval and funding of an Integrated Molecular Imaging Center (IMIC) at KUTRRH and acquisition of a Cyberknife system.

I want to thank the Government through for approving the project and providing funds for these very

critical projects in the country. The IMIC, the first of its kind in Kenya and the East African Region and Cyberknife-the second in Africa position Kenya favourably in the provision of comprehensive cancer care and precision treatment. These facilities provide capacity for early and proper diagnosis and targeted treatment that will improve health outcomes for cancer patients and other conditions.

KUTRRH stands out as a beacon of excellence on the provision of affordable quality patient-centred care to all. I urge all stakeholders to continue working together for the achievement of the Hospital's mission

Chief Executive Officer

“

Kenyans can now enjoy quality health-care with one of our core objectives being to provide highly specialised health care services on a referral basis.

Ahmed Dagane, MBA-HCM, BSN, BA, RN
Chief Executive Officer

“At KUTRRH we are determined to make Universal Health care a reality”

Since 2020 KUTRRH has grown exponentially. From under 200 beds at inception the hospital now has a capacity of 650 beds. Our workforce has expanded over time and we are proud to host over 1000 highly trained members of staff.

I appreciate the support the hospital has received from the Government, the Board of Directors, the public and private sector from inception to date.

I am happy to note that so far, the, purely, referral model that the Hospital has implemented is working. I want to thank other healthcare facilities and practitioners for adhering to the Ministry of Health Referral guidelines when referring patients to our Hospital.

I urge all Kenyans to adhere to those guidelines and seek primary health care in lower-level facilities. This will allow KUTRRH

and other level 6 hospitals to provide specialized health care to those who need it.

This will allow KUTRRH and other level 6 hospitals to provide specialized health care to those who need it. I am pleased to announce that as Management and Staff, we are committed to the realization of the Hospital's objectives.

To realize them, the Hospital is equipped with the state of the art facilities to offers services in Oncology, Trauma & Orthopedics, Renal, Cardiology, Obstetrics and Gynecology, Pediatrics, Rehabilitative Medicine, Dentistry, Dermatology, Pathology and Laboratory Medicine, and Accidents and Emergency services.

To date we have over 30 specialized clinics that enable us to offer the most comprehensive specialized care for adults and children. Patients accessing these clinics are attended to by highly specialized consultants. We have Surgical Outpatient

Clinics, Comprehensive Care Clinics, Rehabilitative Services, Oncology Specialized Clinics, Nutrition Clinics, Nutrition Clinics, Orthopedic Clinics, Obstetrics and Gynecology, Nephrology, ENT Clinic, Pulmonology, Cardiology, urology, Plastic and Reconstructive Surgery and Pediatrics amongst several other clinics.

KUTRRH is also equipped with fully functional telemedicine facilities that will foster teaching and research. It will also enable our doctors to undertake collaborative treatment of patients with other hospitals and doctors worldwide. Welcome to KUTRRH.

Directorates

An organization's quality of service depends on how it is structured so as to meet the varied needs of the seekers of its services. In the pre-operationalization stages of KUTRRH great detail and effort was put in hiring the most qualified staff to serve in the directorates of Clinical, Nursing, Administration and Corporate Services, Finance, Training, Research and Innovations, Human resource Development, Planning, Strategy and Partnerships and later the Integrated Molecular Imaging Centre (IMIC). The Directorates have well defined roles.

Directorate of Clinical Services

The Directorate of clinical services is an instrumental department in the hospital that delivers Medical, Surgical, Pharmaceutical, Diagnostics, and Public Health & Quality Assurance services. It further monitors the clinical performance throughout the Hospital and promotes the culture of excellence in patient safety, clinical research, training services, quality of care and patient experience. Moreover, we ensure that patients have access to adequate and appropriate medical staff.

With our core agenda being the delivery of timely and quality clinical services, this department is tasked with the responsibility of medical governance oversight. This entails ensuring that the culture of KUTRRH is team-based, fact-based, customer-based and works towards the achievement of the Vision of the hospital. We also lead and guide the development, approval and implementation of specific best clinical practice and patient care related policies and procedures. Additionally, the directorate ensures that there is cohesion between all stakeholders in clinical referral, clinical research and training in the process of care delivery.

Directorate Nursing Services

The Directorate of Nursing Services exists to provide leadership, oversight and coordination of the nursing services department, its operations, and services quality in collaboration with the Directorate of Clinical Services. Nursing care plays a pivotal role in the provision of patient-centred healthcare. This directorate offers leadership in the determination of clinical and administrative nursing and paramedical goals and direction. This includes formulation and enforcement of nursing service policies, procedures and practices in the hospital that meet international standards.

The prevailing organisation culture

drives the ability to maintain quality service delivery. It is also tasked with the oversight of continuous quality service improvement and patient safety. Part of continuous quality improvement is creating an

opportunity for nursing research and training in collaboration with local, regional and global institutions.

Directorate of Integrated Molecular Imaging Centre

The Directorate of Integrated Molecular Imaging Centre (IMIC) offers both diagnostic and therapeutic services in the management of cancer and other diseases. It is an ultra-modern and the first-ever public IMIC not only in Kenya but also in the region. The goal of the directorate is to increase the capacity of the Hospital to offer a fully comprehensive continuum of cancer care. This capacity entails Prevention, Screening, Diagnosis, Treatment, Survivorship and Palliative

Care. The IMIC Centre includes a commercial Cyclotron, 2 PET-CTs,

a SPECT-CT machine. Added to this capacity is a 256 Slice CT, and a 3.0 Tesla MRI

The Centre will support other cancer centres in the country and the region that invest in PET/CTs through the

provision of consumables (FDGs), general support, personnel and technical support. The Centre has reduced outbound medical tourism instead attracting patients from East, West & Central Africa

Directorates

Directorate of Human Resource Development

The Directorate of Human Resource Development is responsible for creating strategic, operational, and administrative procedures to support employees to ensure optimum performance in the provision of high-quality patient-centred healthcare services. The Directorate focuses on recruiting, developing and retaining top talent and is responsible for formulating, implementing and evaluating HR policies and strategies to support the Hospital in achieving its objectives. The Directorate plays a key role in shaping the DNA of the Hospital by ensuring that staff members are inducted

Training And Induction of KUTRRH new staffs

into the KUTRRH culture and values of the Hospital within the strongly instilling the core workforce.

Directorate of Training, Research & Innovations

The core mandate of the Directorate is to:

- Ensure that training is systematic, demand-driven and in compliance with constitutional and regulatory requirements, institutional policies, procedures and guidelines.
- Work with National Training Regulatory bodies to ensure courses offered by the training institute are accredited.
- Provide guidance on and implementation of training and development functions. It also ensures continuous learning/re-tooling of staff, through providing facilities for medical education, clinical placements & rotations and medical internships.

Administration & Corporate Services

The Directorate of Administration and Corporate Services offers technical and professional guidance to the administrative functions of the hospital. It is responsible for providing leadership, oversight and direction for the smooth, effective and efficient operation of the department and hospital at large. The directorate

offers support to the executive to ensure that the Hospital operates per the organisation's mission. The department develops and fosters effective collaboration between various departments, staff leadership besides other affiliated services to ensure an integrated approach to service provision towards fulfilling the Hospital's vision, mission and mandate.

Planning, Development & Partnerships

The philosophy behind the formation of this department was informed by the Hospital's realization that in order to achieve its overarching objective of enhancing the quality of lives for Kenyans and regional citizens, working in collaboration with other related and like-minded institutions

is more effective than working in isolation. The resultant impact of the directorate responsibilities is to achieve KUTRRH's strategic goal of provision of innovative and evidence-based healthcare in the country and beyond.

To effectively execute this mandate, the Department focuses on six thematic areas: Service Level Agreements (SLAs), Training, Research and Grants; Equipment, power, and manufacturing; Marketing and International Partnerships.

Directorate of Nursing Services

Nurses at KUTRRH

Kenyatta University Teaching Research and Referral Hospital (KUTRRH) was operationalized in September 2019, and it has grown in leaps and bounds with it, the nursing fraternity has expanded. We house over 400 nurses that are trained in different cadres and receive programmed and routine continuous medical education (CME) and staff development programs to ensure high quality of patient care and management. The nursing fraternity at KUTRRH is determined to change the face of nursing in Kenya.

ONCOLOGY

The oncology department of KUTRRH started as one of the flagship projects in September 2019 with a nursing force of 4. Since then, the unit has grown exponentially in the fight against Cancer in Kenya and the region at large.

The Oncology department has several units within itself offering various services in the cancer care continuum. They include inpatient wards, brachytherapy, radiotherapy, chemotherapy, outpatient clinics, palliative care, breast clinic, PET and SPECT scans, and gynae-surgical departments. The Nursing Services directorate plays a pivotal role in the health journeys of all our patients

WELLNESS CENTRE

The Wellness Centre opened its doors on 16th May 2022. It offers preventive health checks for the early detection of various illnesses and identifying risk factors.

It's a one-stop solution to health screening, offering Platinum, Gold, and Bronze packages tailor-made for various clients' needs. The Wellness Centre has a dedicated team of staff including experienced doctors, specialized nurses, a dietician, a phlebotomist, customer care executives, health records, and finance officers who offer excellent services to clients.

The nurses at the Centre play a big role in ensuring a seamless experience in wellness check-ups and in preventive and promotive health.

WOUND CARE CLINIC

The KUTRRH Wound care unit was started in January 2021 led by a wound care/stoma specialist. Since then, the team has grown to 8 wound care nurses with different sub-specialisations.

- Stoma continence
- Oncology wound care
- Trauma wound care
- Wound care & stoma continence specialists.

The clientele has increased both in the wards and in the outpatient special clinic which runs every week from Monday to Friday, seeing an average of 35-40 patients per day. Over 10,000 patients have been served since the team's inception. The various wounds managed at our clinic for both outpatient and inpatient clients include:

- burns,
- chronic venous arterial ulcers,
- malignant wounds,

- post-surgical wounds
- degloving traumatic wounds,
- diabetic foot ulcers,
- grafted ulcers,
- marjolin ulcers,
- pressure injuries.

The wound care clinic is committed to treating acute and chronic wounds through a multidisciplinary approach in terms of advanced wound care management, including surgical intervention from a team of

Plastic Reconstructive & Aesthetic surgeons.

KUTRRH offers the best modern wound care therapy options which include:

- Maggot therapy
- VAC therapy (NWPT)
- Top closure
- Advanced dressing materials
- Care of advanced interventions e.g. tissue flaps, skin grafts injuries.

Directorate of Nursing Services

CENTRE FOR SPECIALIZED CLINICS

KUTRRH offers the most comprehensive specialized care for adults and children in the region. As part of the hospital mandate in achieving the goal of Universal Health Care, KUTRRH has advanced in different fields of specialty run by various consultants in the outpatient clinics.

Patients accessing these clinics are booked to a specific consultant during their clinic days across the week and an appointment schedule date is communicated by the health records officer. Booking and enquiries can also be done through calling 1558 (toll free).

NEONATAL INTENSIVE CARE UNIT

The Neonatal Intensive Care Unit (NICU) is one of the specialized services offered at KUTRRH. We hold pride in a bedrock of essential services to new-borns who need it. With a combination of neonatal and paediatric nurses, we anchor our services on a family-centred approach.

Of the many success stories from the NICU, the nurses walked the journey of a neonate born preterm at 25 weeks' gestation and weighing 600 grams to a successful discharge weighing over 2 kilograms.

Among the services offered are mechanical ventilation, cardiac monitoring, phototherapy, and alumni parents' peer support.

Neonates should not start life battling for it; however, some do, and the KUTRRH NICU nurses are available to support and enhance their well-being.

MEDICAL-SURGICAL

The glue that holds Nursing Services together is a team of close to 200 medical-surgical nurses who serve as the bridge between all the specialties.

The medical-surgical units offer care to patients in the medical wards, surgical wards, and isolation units. Given the high burden of communicable and non-communicable diseases in the country and the region at large,

the nurses of KUTRRH play a critical role in the provision of promotive, preventive, and curative services. This is geared towards the achievement of patient-centred care and excellent outcomes.

KUTRRH Nursing Services also participate in outreaches and medical camps within and outside the hospital campus.

CRITICAL CARE DEPARTMENT

Kenyatta University Teaching, Referral & Research Hospital (KUTRRH) Critical Care Unit is one of the largest intensive care units in the country with a 46-bed capacity: 24 ICU, 8 bed HDU and 14 bed Infectious Disease Unit (IDU). The critical care department is supported by a team of 88 experienced critical care nurses who have worked together to build it up to be one of the best noted critical care units in Kenya.

Our modern, state-of-the-art medical equipment enables the

nurses to provide meticulous nursing services such as continuous cardiac monitoring, mechanical ventilation, haemodialysis and CRRT, not forgetting that KUTRRH ran the largest COVID-19 treatment centre in Kenya. An in-house pharmacy, mini lab and a mini commodities store are housed in the unit that gives the nurses a better turnaround time for patient care.

Nurses also serve as Infection Prevention Control (IPC) champions who help monitor and control infections, therefore reducing stay length for patients in the unit. The IDU-ICU serves as the isolation unit for all patients with infectious diseases requiring critical care. The Cardiac Care Unit admits patients post open heart surgeries and Cath lab procedures.

There is a collaborative team approach in patient care and management with all the specialties involved in daily patient care. KUTRRH believes in persistence and consistency in the care and management of critically ill patients, and prompt intervention to save lives in line with the Hospital's vision and mission.

With over 30 specialised clinics, KUTRRH offers one of the most comprehensive specialised care for adults and children in the region. As part of the hospital mandate in achieving the goal of Universal Health Coverage, KUTRRH is looking at the transition to post COVID by opening other additional referral services including specialised outpatient clinics. Patients accessing these clinics are attended to by highly specialised consultants. Moreover, patients accessing these clinics have access to follow up care through the clinics.

Our Specialised Clinics include:

1. Surgical Outpatient Clinics (SOPC)

SOPCs handle the patients who have undergone surgery within the Hospital and post-surgery referrals from other facilities.

The SOPC has:

- General Surgery
- Neurosurgery
- Orthopaedic & Trauma Surgery
- Cardiothoracic
- Paediatric surgery specialists,

3. Medical Outpatient Clinics (MOPC)

These clinics handle medical patients with conditions such as diabetes, hypertension, endocrine disorders, renal, gastrointestinal, among other medical conditions. Physicians, Nephrologists, and endocrinologists man these clinics.

4. Comprehensive Care Clinics (CCC)

CCC is our robust HIV/AIDS care for patients who have tested positive in the facility during routine HIV testing, and those referred from other facilities. Our pharmacy stocks quality HIV drugs and upholds the utmost confidentiality of the patients. The variety of specialists' available means that any other complications or opportunistic infections that may arise during treatment are effectively addressed.

5. Obstetrics and Gynaecology

This clinic addresses women health issues such as fertility, pregnancy and birth, and other gynaecological concerns to help them achieve optimal health. The services are provided by a qualified team of obstetrician/ gynaecologists who employ innovative procedures and state-of-the-art equipment for diagnosis and treatment.

10. ENT services

The ENT clinic is staffed by highly qualified and Board Accredited ENT Surgeons. They treat newborns to elderly patients with a broad spectrum of diseases ranging from major head and neck procedures to ear microsurgery.

Centre for Specialised Clinics

7. Dental services

KUTRRH is focused on offering the highest quality of dental healthcare services facilitated by our highly trained team of dentists, dental specialists and oral hygiene care providers. Some of the services to be provided include:

- Orthodontics
- Oral Surgery
- Periodontics
- Prosthetics (bridges, crowns and

dentures)

- Restorative dentistry

The combination of specialised skill and sophisticated technology will make the treatment experience more enjoyable than dreadful.

8. Ophthalmology

Our clinical eye specialists diagnose and treat a wide range of eye conditions from routine eye examination to surgery. Our services include:

- Handling refractive procedures
- Age-related macular degeneration
- Treating diabetic retinopathy
- Glaucoma treatment and surgery
- Cataract and intraocular lens implants
- A wide range of eye evaluations.

9. Cardiology

Our Cardiology Centre boasts a clinic and a CathLab. The services offered here include:

- Echocardiogram
- Electrocardiogram
- Stress Tests
- Holter Monitor
- Blood Pressure Monitoring

We also boast a state-of-the-art Catheterisation Laboratory which provides catheterisation to complex interventional procedures. The centre is operated by qualified Cardiologists, Interventional Cardiologists among other staff.

Paediatrics and Child Health Clinics

The paediatrics and child health clinics are committed to improving health care for children. The clinic is made up of skilled and child friendly environments to help children of all ages. The clinics offer a range of treatments, specialists and services. Services offered Include.

- Peritoneal dialysis
- Haemodialysis
- General Paediatrics
- Paediatrics Neurology

services

- Paediatric surgery
- NICU bed capacity 15
- PICU bed capacity 2 with one bed in isolation

We are planning to expand the paediatric wards.

Specialist available are:

- Paediatric Neurologist
- Paediatric Surgeon
- Paediatric Neonatologists
- Paediatricians
- Paediatric Nephrologist
- Nutritionist

• Paediatric Intensivist

We have specialized NICU, PICU, Neonatal and paediatric nurses.

We also have occupational therapists, physiotherapists, speech therapists and we are also able to do audiometry.

We are planning to open a child development centre for children with neurodevelopment disorders like Autism spectrum disorders, ADHD, Speech disorders, behavioural disorders.

Other future clinics include.

- Paediatric Gastro-enterology
- Paediatric Cardiology
- Paediatric Endocrinology
- Paediatric Pulmonology
- Paediatric Rheumatology
- Paediatric Haem-oncology
- Paediatric Nephrology

OUR EXECUTIVE WING

Onesmo Ole-Moiyoi

Our Onesmo Ole-Moiyoi Executive Wing hosts one Presidential Suite and three VVIP suites. It is located within a private block, on a separate floor, with a red carpet entrance, secured with CCTV and biometric access.

Exceptional Healthcare Amenities

The suites are:

- Equipped with state of the art dedicated ICU equipment
- Staffed with skilled and experienced professionals to offer quality patient-centred care
- Equipped with a top-notch Hospital Management Information System to optimise care delivery
- Access to a personal doctor(s) is allowed

- Confidentiality is a top priority and strictly adhered to

5-Star Hotel Amenities

The Suites are spacious, airy, well lit and tastefully decorated to create the ambience of a five-star hotel. Some of these amenities include:

- A patient room with a comfortable hospital electric bed
- A living area within the room features a desk, a chair, and a smart TV
- A Jacuzzi tub with a separate shower
- Ample wardrobe storage with a digital safe
- Central air conditioning, a

refrigerator, internet access, water dispenser, complimentary grooming kit and daily newspaper.

Patients can enjoy daily menus a-la-carte from our executive kitchen within the wing and have the choice to bring their chef to prepare their meals.

An Office Away From Office

There is an executive boardroom within the unit that can host up to 10 persons for family conferences. Three suites also have offices with executive desks, desktops with teleconferencing capabilities, landlines and a separate private lounge for guests to relax in.

Clinical Services

The Hospital houses a range of specialised clinical and nursing services that are offered on a referral basis. Moreover, it is well equipped to facilitate our full range of healthcare professionals to offer patient-centred care in the following areas:

- Oncology
- Renal care
- Trauma and Orthopedics
- Physiotherapy and Rehabilitative Services
- Internal Medicine
- Accident and Emergency services

- Critical care services (ICU & HDU)
- Pathology and Lab medicine services (Basic and specialised)
- Diagnostic Imaging Services such as MRI, CT Scan
- Cardiology
- Pediatrics and Child Health
- Obstetrics and Gynecology
- Ophthalmology
- Theatre Procedures
- Medical-Surgical services
- Pharmacies

Cancer Care Centre

The Cancer Centre is fully equipped with the latest state of the art equipment for cancer diagnosis and treatment. Cancer is the 3rd leading cause of deaths in Kenya and second among non-communicable diseases accounting for 7% of overall mortality rate.

KUTRRH comprehensive Cancer Centre is one of the Hospital's flagship projects aimed at filling the gaps of cancer care in the country in terms of early screening, diagnosis and treatment. For cancer diagnosis, the Department uses the MRI, CT Scan, Ultrasound, and Blood Tests. The available treatment options are Surgery, Chemotherapy, and Radiotherapy.

Radiotherapy is key to cancer treatment, with over 60% of the cancer patients requiring it. To cater for this need, the Department has a modern Linear Accelerator a machine for precision radiotherapy which includes 3D radiation. The Hospital also has an Integrated Molecular Imaging Centre (IMIC) for comprehensive early diagnosis.

The Cancer Centre is run by experienced Oncologists, Medical Officers, Pharmacists, Oncology Nurses, Medical Physicists and Radiotherapy Technicians. This team of dedicated professionals is committed to ensuring all cancer patients who walk through the Centre's doors receive the highest quality care possible.

Currently, the Centre can provide radiotherapy treatment to over 100 patients in a day, reducing the waiting period. This has been possible through proper planning and improved efficiency in capacity utilization. Beyond having the state-of-

art equipment and staff, the Hospital is forging collaborations with local and international institutions. The goal is to carry out groundbreaking research and to offer innovative clinical care that provides precise treatment to patients. Most importantly, care is patient-centred, where every patient is offered individualized attention.

Radiotherapist operating a linear accelerator.

Paediatric Cancer Care

Young cancer patient meets the former President H.E Uhuru Kenyatta during the Commissioning of the hospital.

Of the approximately 160,000 children and adolescents diagnosed with cancer annually worldwide, 80% live in low- and middle-income countries (LMIC's) where access to quality care is limited and chances of cure are low. About 80% of childhood cancers are potentially curable, but only 20-30% of children treated in Kenya experience long-term disease-free survival.

Through the operationalisation of a Paediatric Oncology unit at KUTRRH, it is anticipated that all children with cancer at our facility, will get optimal and timely treatment. This will result in relief to the overwhelmed health system and improved survival for Kenyan children. The KUTRRH paediatric cancer unit boasts a 12-bed in-patient and a 6-bed out-patient capacity. The unit offers a full spectrum of services such as:

- Chemotherapy: Features a child-friendly chemotherapy treatment carried out on in-patient and out-patient basis.
- Child optimised radiotherapy:

KUTRRH IMIC Director explains a patient's cancer care journey.

Optimised to manage all paediatric malignancies with a special focus on brain tumours.

- Play therapy: Music, art, toys, and other forms of play therapy are heavily utilised to enhance a therapeutic environment for children.
- Palliative care: We offer counselling support to the family members and the child

throughout the treatment process.

Surgical Oncology Unit: KUTRRH is in the process of developing a paediatric surgical oncology unit to ensure holistic care and therefore, secure a potential cure.

A Cath Lab (Cardiac Catheterization Laboratory) is a special hospital room where doctors perform minimally invasive tests and procedures to diagnose and treat cardiovascular disease. The procedures performed in a cardiac Cath Lab almost always involve tiny, flexible tubes, called catheters, which can be used instead of surgery, to access the heart and blood vessels. A Cath Lab has special imaging equipment used to see the arteries and check how well blood is flowing to and from the heart. This information helps the care team to diagnose and treat blockages and other problems in the arteries.

The Cath Lab at KUTRRH was operationalized in mid-2022 and has emerged as a high-quality Cardiovascular care Centre of excellence in the country and the East Africa Region. The facility has attracted the best interventional cardiologists and surgeons with

the finest medical skills and compassionate care. They also work together with a team of highly experienced and trained cardiac nurses, radiographers and theatre technicians to provide care according to your specific needs. The goal is to offer high-quality heart care that has helped patients to live optimal lives.

The Cardiac Catheterization Laboratory at KUTRRH is a modern, technologically advanced facility with a wide range of equipment's comprising of state-of-the-art biplane imaging, which provides excellent quality angiograms with very little X-Ray exposure to patients and medical personnel. Various services are offered at the Cath lab:

Outpatient & Consultation Services

- Outpatient Cardiac clinics/ Consultations.

- Cardiovascular Health Screening
- Echocardiography (Transthoracic & Transesophageal)
- Electrocardiogram (ECG).
- **Pacemaker interrogation and programming.**

Invasive Cardiology Service

- Coronary Angiography
- Right and left cardiac catheterization.
- Coronary Balloon Angioplasty
- Coronary Ballooning and Stenting.
- Cardiac device implants such as Pacemakers, ICD, CRTD, CRTD
- Peripheral Angiogram.

Interventional Radiology

- Ureteric stenting
- Biliary stenting
- Nephrostomy
- Uterine Artery Embolization.

The Renal Unit

Open 24 Hours

Statistics from the Kenya Renal Association estimates that 4 million Kenyans are suffering from kidney disease, and by the year 2030, the number will rise to 4.8 million. Moreover, between 2006 and 2018, the number of patients on chronic haemodialysis in both private and public hospitals grew eight times, from 300 to 2,400.

It is with this in mind that KUTRRH established the Renal Department. The department has 20 Renal Units. Highly skilled Renal Specialists and Renal Nurses offer treatment to patients who require dialysis. The centre is presently able to carry out dialysis to 20 patients in a day. With renal dialysis being one of the core services offered by KUTRRH, the dialysis water treatment plant is key in the timely provision of care.

This new advanced plant delivers purified water that is used for renal dialysis treatment to remove salts and waste, maintain safe levels of chemicals in the patient's blood, and maintain blood pressure.

Given that the quality water used in dialysis has a direct impact on a patient's health, the treatment plant ensures that the water meets strict quality control requirements.

Renal Water Plant

Dialysis water treatment plant

KUTRRH Home Afya

The KUTRRH HOME AFYA program is a home based care program. The hospital is keen to deliver quality health care to everyone in the country and beyond. Through use of mobile technologies and point-of-care testing and observation, patients receive relevant healthcare right at the convenience of their home.

Home based care offers our patients a cost-effective approach to health care delivery. The comfortable environment of home offers a stimulus for quick healing. With the medical personnel being just a phone call away, patients are granted easy access to medical services through our call-care center.

Home-based care allows health care to be delivered not just to

individuals but to entire families. In the service delivery, the hospital upholds the Ministry of Health home based care guidelines.

Why Home Care

- For Comfort: Care delivered from the comfort of your home
- For Convenience: Get quality care right when you need it
- For Efficacy: Get timely consultations and referrals
- For Quality: Get adequate follow up for your condition
- For Saving: Get affordable medical care.
- For Community: Get the entire family/company/organization followed up.

What We Do:

We offer the following services;

- Consultations with expert medical specialists through various telemedicine platforms
- Nutrition counselling services
- Physiotherapy consults
- Medical examination equipment useful for the home environment
- Consultancy services to companies, organizations and research institutions
- Psychological counselling services.
- Infection Prevention and Control training and counselling.

Clinical Services

Accident And Emergency (A & E) Department

The department receives an average of 40,000 patients annually from Kenya and the East African region. The staff at the emergency room are highly specialized and comprise of emergency nurses and doctors.

Our department has 4 resuscitation beds, 8 observation

beds, and 8 consultation rooms. Services at the department are supported by a 24-hr A&E laboratory service, A&E Pharmacy, and an A&E X-ray Unit.

The A & E unit houses a number of units:

- Adult Emergency Unit
- Pediatric Emergency Unit

- Adult Outpatient Department
- Pediatric Outpatient Department
- Emergency response - ACLS Ambulance services
- Helipad for aerial transportation

Operating Theatres

KUTRRH has eight (8) theatres that are used to carry out surgical operations in an aseptic environment. The theatres are equipped with the current state of the art equipment and are well-lit. They also feature telemedicine facilities that include cameras, viewing screens and monitors used for educational purposes or for surgical consultations.

The operating theatres have additional unique features such as:

- Controlled temperature and

humidity.

- An HVAC system to filter the air and maintain a slightly elevated pressure
- Power backups
- Wall suction, oxygen, and other anaesthetic gases.

Out of the 8 theatres, three of these are general theatres which include:

- Accident & Emergency Theatre
- Maternity Theatre
- Laparoscopic Theatre

The remaining 5 offer operational support to the specialist clinics,

which include:

- Neurosurgery
- Cardiology
- Ophthalmology
- Kidney transplant
- Ear, nose and throat (ENT)

Other great features of the theatre department include:

- Open heart surgical equipment
- Cathlab for closed cardiovascular surgery
- An endoscopic unit
- A Central Sterile Services Department (CSSD)

Triage

Triage Room

Triage Rooms are usually the first points of contact in the hospital with the primary goal being to check the patient's vitals. Moreover, they are used to determine the urgency of treatment to help with scheduling.

The policy at KUTRRH is that patients are first triaged before anything else is done. This helps to determine which patients require urgent attention, thus improving outcomes.

Central Sterile Services Department (CSSD)

The CSSD plays a crucial role in providing the surgical sets and equipment required to deliver quality patient care. It is an integrated place that performs sterilization of medical devices, and equipment. These items are usually for subsequent use by health workers in the operating theatre and other aseptic procedures, such as catheterisation, wound stitching and bandaging.

The department ensures that the devices are appropriately

cleaned, disinfected, sterilized, inspected for quality to ensure proper working condition, and are available at the point of care. In the absence of proper handling, processing and storage, these devices may become contaminated and become sources of cross infections. To achieve this vital role, the department is staffed with well-trained and skilled professionals, who are committed to "doing what's right" every step of the way.

Nutrition & Dietetics Care

The nutrition & dietetics officers act as a consultants within the multidisciplinary healthcare team to ensure that patients receive appropriate nutritional care in all specialist clinical areas. Our services comprise clinical development, implementation, evaluation and education.

The department focuses solely on all therapeutic patients who need nutritional intervention. With the help of the clinical dietitians/nutritionists, proper care is given and an individualized approach

is planned in terms of providing a nutritional care plan suited to the patient's medical treatment.

In-Patient Clinical Nutrition Care

Clinical Nutrition provides comprehensive nutrition care to patients admitted under the services of any discipline. The patients are screened for nutritional risk on admission by the admitting nurse, those established to be at risk are referred for nutritional therapy consultation. Dietician /Nutritionist

does the nutritional assessment and identifies nutritional deficiencies or malnutrition. Nutritional modifications and individualized recommendations for nutritional management and implementation of therapeutic diets within the hospital are made. Dieticians/nutritionists can discuss nutritional needs for home use with the family and can provide education on normal nutrition and any modifications that may be needed for special diets. The dietician/nutritionist works hand-in-hand with catering to provide therapeutic meals to the patients.

Out-Patient Clinical Nutrition Care

The Nutrition Consultation Clinic at KUTRRH provides medical nutrition therapy/ nutrition consultations, which can assist in the treatment of: Dyslipidemia, Adult and Pediatric weight management, Hypertension, Diabetes Gestational Diabetes, Renal insufficiency and Other medical conditions related to nutrition and diets.

KUTRRH Blood Donor Unit

Blood donation is a critical activity in the hospital since it helps in saving lives whereby one single donation can save up to three lives as it provides different blood components that can support up to three different people.

Every adult human being (male or female) has 5 to 6 litres of blood. Any person between 18 and 60 years, weighing 50 kg and above can safely donate one unit of blood, that is, 450 ml once every three months. After donation, the blood volume can be recovered within 24 hours, and the haemoglobin count returns to normal within two weeks

KUTRRH Blood donor unit has a 10-bed capacity, and it operates daily from 8 am to 5 pm, including the weekends. The unit collects and screens the blood to ensure that it is safe to use.

Sluice Rooms

The sluice rooms are the cornerstone of hygiene in the hospital to prevent cross infections. Each medical and surgical department in the hospital has a sluice room where surgical and medical instruments are sterilised, and used disposables such as incontinence bedpans and pads are dealt with.

Imaging

The Imaging department plays a critical role in the hospital. It helps identify abnormalities and assists the doctors in offering correct diagnoses and treatment of disease by revealing what lies beneath the skin.

This is made possible by the ultra-modern equipment that enables the hospital to offer the following services:

CT Scan

Imaging Services

- CT-Scan
- Magnetic Resonance imaging (MRI)
- Digital radiography that includes advance X-ray equipment
- Ultrasound
- Cathlab
- Fluoroscopy
- Ultrasound

The imaging department is comprised of a multidisciplinary team which includes Radiologists, Radiographers (X-Ray Technologists), Sonographers (Ultrasound Technologists), Nurses and other support staff who work in unison to facilitate accurate diagnosis of patients.

The combination of ultra-modern equipment and multidisciplinary team facilitates effective, safe, and high-quality imaging which promotes sound medical decision-making. This helps improve diagnostics and health outcomes.

X-ray equipment

MRI

Critical Care Services

KUTRRH has 68 fully equipped critical care unit beds. These include 24 general intensive care unit beds, 8 cardiothoracic ICU beds, 14 infectious disease ICU beds and 22 surgical ICU beds. The ICUs are manned 24/7 by a multidisciplinary team that includes specialists, medical officers, critical care nurses, physiotherapists, nutritionists, radiographers, ultra sonographers, biomedical engineers

ICU Wing

and clinical pharmacists among others. The ICUs are based on the open-model system where patient care is individualized with various specialists invited to review patients on a regular basis to ensure world class care for the patients. Daily multidisciplinary clinical rounds are consultant led with medical officers on site 24/7. The units are fully equipped with the latest medical equipment and an in-house pharmacy to ensure timely administration of medications as prescribed by the clinical team. All forms of renal replacement therapy are available within the ICU which includes all forms of hemodialysis, continuous renal replacement therapy (CRRT) and plasmapheresis. Family conferences are held daily to update the next of kin on the patients' progress. The hospital has a separate neonatal ICU and pediatric ICU to cater for needs of children.

ICU Bed

Cardiac Monitor

Public Health

The Public health department at Kenyatta University Teaching, Research and Referral Hospital (KUTRRH) was operationalized on October 2019 with the main focus on disease prevention, health promotion and protection of the public from the infections by putting up strategies to prevent disease through health education and promotion, food and water quality, effective health care waste management, pest, vermin's and vector control, occupational health and safety disaster preparedness and mitigation measures, and much more. The department has 6 public health officers who are regulated and licensed by the Public Health Officers and Technicians Council (PHOTC). The contribution of public health officers is of essential significance in patient satisfaction through creation of a conducive service environment,

reduce health and occupational risks, and increase awareness on non-communicable and communicable diseases. This is done in line with the Public

Health Act Cap 242, other related acts and both international and regional guidelines and policies.

Dental Services

KUTRRH is focussed on offering the highest quality of dental healthcare services facilitated by our highly trained team of dentist, dental specialists and oral healthcare providers.

With highly qualified professionals, high patient turnaround time, patient-centred care, and all under a multi-speciality institution.

Some of the services offered:

- **Dental consultations and treatment**
- **Paediatric Dentistry**
- **Teeth cleaning and whitening**
- **Teeth alignment (braces)**
- **Teeth replacement (dentures and implants)**
- **Teeth fillings and crowns**
- **Root canal treatment**
- **Teeth extractions**
- **Maxillofacial surgery**

Maxillofacial Surgery

Specialized dental surgery which deals with diseases and conditions of the face and the oral cavity.

This includes: cancers, benign tumours, trauma, craniofacial anomalies and cosmetic surgery.

Rehabilitation Services

Rehabilitation Medicine is concerned with improving functioning through the diagnosis and treatment of health conditions, reducing impairments, and preventing or treating complications. The KUTRRH's rehabilitative services department is enviously well equipped and adequately spacious.

It is also staffed with specialised qualified and registered physiotherapists, occupational therapists, speech and language therapists, ortho trauma technologists as well as orthopaedic technologists. These professionals are committed to providing and maintaining quality patient-centred standards of health care. Through evidence-based practise on health promotion, preventive health-care, treatment, and rehabilitation, we aid our patients to reach their full potential following injury, illness or surgery.

Services offered include:

- Physiotherapy
- Occupational therapy
- Ortho-Trauma services
- Speech and Language therapy

Rehabilitation Services

The hospital has a rehabilitative devices shop that stocks orthopaedic assistive devices

such as:

- Wheelchairs
- Crutches-both elbow and axillary
- Walking frames adjustable and non-adjustable
- Tripods

• Splints

- Anti-embolic Stockings
- Supporting Corsets, knee supports, ankle supports, wrist supports etc.
- Prosthesis-Breast, lower and upper limb

Obstetrics and Gynaecology

KUTRRH strives to address women's health issues such as fertility, pregnancy, birth as well as gynaecological concerns. The KUTRRH Obstetrics typically called Maternity Services, takes care of the pregnant woman, her unborn child and the postpartum period.

Services offered include;

- Ob-Gyn Services
- High risk obstetrics with Neonatal ICU
- Fertility treatment
- Gynaecological surgery

which includes minimally invasive surgery like laparoscopy and hysterectomy and open surgery

- Gynae-oncology (women cancer specialist)

Gynae-oncology services

- Screening for cervical cancer
- HPV vaccine provision
- Colposcopy services
- Surgical and medical management of cervical, ovarian, uterine, vulval and

vaginal cancers, gestational trophoblastic disease

- Chemotherapy and radiotherapy services

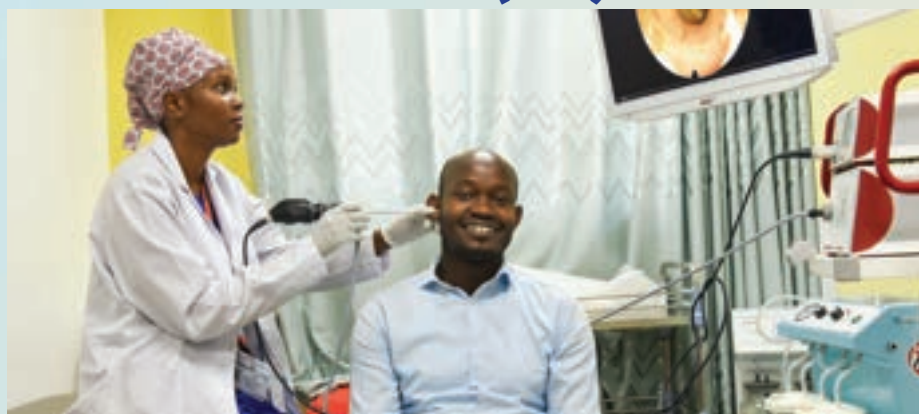

Clinics and Surgery

- Obs-Gynae clinic and surgery
- Gynae- Oncology Clinic and surgery

Obstetrics

- Antenatal Clinic on Monday (30 patients a day)
- Postnatal clinic Wednesday 15 patients a day

Ear, Nose And Throat (Ent)

The ENT clinic is staffed by highly qualified and Board Accredited ENT Surgeons. They treat newborns to elderly patients with a broad spectrum of diseases ranging from major head and neck procedures to ear microsurgery.

The ENT clinic provides the following services:

- Hearing assessment and ear examination
- Wax management
- Hearing test
- Snoring treatment
- Tonsil surgery

- Nasal blockage
- Allergy management
- Sinuses management
- Voice problems
- Thyroid surgery
- Salivary gland surgery

More information on the email from Dr. Moko

Head and Neck Surgery

This is a subspeciality of ENT that has advanced head and neck surgery that deals with cancers of the head and neck and any other complex complications.

At KUTRRH we have a well experienced surgeon, almost every diagnostic test, a professional team of multi-disciplinary medics for support and support facilities within the hospital.

COMPREHENSIVE BREAST CARE CENTRE

In 2022, KUTRRH commissioned a comprehensive Breast Care Center which is centered on providing solutions for all breast-related issues. The care centre is equipped with state-of-the-art machines and medical staff who provide quality patient care. KUTRRH Breast Care Center was conceptualized to help provide an affordable and safe environment for breast-related check-ups;

breast pain, discomfort, rashes, discharge, lumps, mastitis, cancer and any other breast concerns. It is important to check on our breast health and sensitize people on the importance of going for regular check-ups.

Why KUTRRH for Breast Care Consultation

- State of the art equipment.
- Meets the need of all breast related concerns.
- Affordable.

- Onco-plastic surgeon on call.
- Most insurance providers are accepted
- No need for appointments.
- Pap smear services also offered

Other Services offered include;

- Screening.
- Consultation.
- Ultrasound for ladies under 40.
- Mammogram for ladies above 40.
- Counselling services
- Nutritional counselling services

Palliative Care

We meet the needs of all patients requiring relief from symptoms and psychosocial and supportive care, particularly those with advanced stages who have a meagre chance of being cured or who are facing the terminal phase of the disease. Cancer and its management have emotional, spiritual, social, and economic consequences for patients and their family members.

Physical pain is managed and it's a long-term process.

Specialized staff

Specialized nurse- 2

Medical officer- 1

1. Pain Management- Outpatient and ward- Works with patients from diagnosis, oncology patients. Other patients with terminal illness also work with palliative care. A wholistic assessment is done on the patient; physical, mental, emotional, psychological, and spiritual. This is to offer support and prepare the patient for the treatment.

2. Educate the family and patient. The family is educated on the journey the patient will go through and to provide psychological support to help when taking care of the patient. They are also educated on end life care or change of course in treatment to help them make decisions with ease. The patient also chooses their next of kin.

3. Home-based care is a result of where the patient and family would not want to accumulate a huge bill or when the disease has progressed, and the patient is terminal. The family is taught how to take care of the patient when at home.

4. Family conference- in case the patient is discharge where a disease side effect they have to live with them.

5. Support groups which support and educate patients on finance and nutrition. They also offer social support for needy and or stigmatised patients.

Palliative care manages symptoms; Physical, social, spiritual, psychological.

For oncology patients, its mandatory for the palliative care team to meet them after diagnosis and guide them through the process that prepares them for treatment.

Pharmacy Department

The pharmacy department is the custodian of drugs and plays a crucial part in a hospital set-up. The pharmaceutical team is responsible for monitoring the supply of all pharmaceuticals. Thus, the team is mandated to purchase, process, dispense and control all pharmaceuticals within the hospital premises. Pharmaceutical suppliers are vetted thoroughly to ensure quality, affordable, and efficacious medicines.

At KUTRRH, we pride ourselves in quality patient-centered care. The staff comprising of pharmacists and pharmaceutical technologists are highly trained and dedicated to ensuring good patient outcomes and patient satisfaction. The pharmacies outlets include:

- The main pharmacy: This is the central pharmacy that serves both inpatient, outpatient, specialized clinics, theatre and wards

- Accident & Emergency Pharmacy operates round the clock serving inpatient, outpatient and emergency prescriptions

- Oncology pharmacy offers specialized care to cancer patients. With a dedicated oncology ward, the oncology pharmacy monitors therapies for patients in both inpatient and outpatient setting

- IMIC Pharmacy is a radiopharmaceutical pharmacy outlet that works in conjunction with the oncology pharmacy to offer optimized cancer care

- Specialized Clinic Pharmacy. Being a referral hospital, we offer specialized care to patients that need dermatology, ophthalmology, neurology, pediatrics, and cardiology care. As such, there is a dedicated pharmacy outlet to serve patients in the critical and specialized care units

- The Pharmacy Commodities and Supplies Unit (PCSU) acts as the central store. The unit is responsible for purchasing, storing, and distributing pharmaceutical products to the various pharmacy departments and it is an integral part of the pharmacy supply chain and logistics

In a bid to ensure efficiency in pharmacy operations, the following changes have been implemented as of March 2023:

Centralized In-patient services at the Main Pharmacy

Starting in March 2023, all in-patient prescriptions will be served at main pharmacy. This will take off the workload from the Accident & Emergency and the specialized clinic pharmacies, so that they can focus on providing quality care to emergency and out-patient prescriptions.

Theatre Pharmacy

On average, KUTRRH undertakes about 25 elective and emergency surgeries per week. The creation of the theatre pharmacy will ensure timely and appropriate drug stock management, drug dosing and dispensing. Consequently, this will minimize drug errors and optimize medication therapy monitoring.

Increased Human Resource Capacity

So as to better serve our patients, we have tripled our staff from 13 to 39. The team comprises of specialized clinical pharmacists, pharmacists, and pharmaceutical technologists that are qualified and ready to serve. More qualified staff translates to reduced patient waiting time and increased efficiency.

Bar-coding

The introduction of barcodes to all pharmaceutical products is

revolutionary to the control and monitoring of stock. The barcodes will ensure easier tracking of all pharmaceuticals from the stores to the dispensing levels. Moreover, barcoding coupled with the "First-Expiry-First-Out" (F.E.F.O) system, will improve inventory control, limit the number of expired drugs, and inform better decisions when making timely orders from pharmaceutical suppliers.

In-built Cold Room

Over the past one year, the Pharmacy Commodities and Supplies Unit (PCSU) department has been equipped with a state-of-the-art cold room. This has increased the cold storage capacity of pharmaceutical products especially cancer medications. The pharmacy is able to serve more oncology patients who require cold-chain medications.

Key Performance Customer Service Indicators.

The pharmacy department values feedback. This enables the unit to better understand the patient's experience and identify areas of improvement or gaps in customer service. This has been

implemented by performing two customer service surveys conducted every quarter so as to monitor and improve our services.

Laboratory Medicine

State-of-the-art Equipment

1. ARCHITECT Plus (ABBOTT) i1000SR

2. ARCHITECT Plus (ABBOTT) C4000

3. MINDRY CL-1200i

Housed in the Department of Pathology and Laboratory Medicine, KUTRRH's main Laboratories are located in the First floor of the Main Hospital Block with an Annex Laboratory at the Accident and Emergency Unit. The Laboratory forms an integral part of The Patient-Centered Care at Kenyatta University Teaching, Research and Referral Hospital. Offering a 24-hour service in diagnosis, the department is run by a highly qualified and dedicated team of Medical Laboratory Technologists/Scientists and support staff. The services are provided in a state-of-the-art facility equipped with well-maintained modern automated equipment.

The Laboratory provides services in various areas like, *Phlebotomy, Clinical Chemistry, Special Chemistry, Hematology/ Bloodtransfusion, Histopathology/Cytopathology.*

The Laboratory is composed of various sub-specialties providing high standards of patient care and safety. These sub-specialties include:

1. Hematology and blood transfusion

The section strives to provide the highest standard of both clinical

and laboratory hematological care with a state-of-the-art laboratory employing up-to-date techniques such as Flow Cytometry, Hemoglobin Electrophoresis, Specialized Coagulation diagnostics, Aphaeretic Platelets and Electronic Cross match. The unit serves in the treatment of a broad range of benign and malignant hematological disorders both to our in-patients and out-patients. The blood bank is able to make blood products for patients when required, using the latest technology. Bone marrows are also processed.

2. Clinical Microbiology and Molecular Biology

This is a full-service laboratory offering diagnostic bacteriology, mycology, parasitology, virology, and mycobacteriology and molecular pathology.

3. Clinical Pathology

The Clinical Chemistry Laboratory is a state-of-the-art, fully automated laboratory. Clinical Chemistry includes STAT and routine testing in the areas of general chemistry, endocrinology, special chemistry, immunology, and toxicology.

The Chemistry Laboratory performs over 1 million reportable tests per year. The testing menu

includes routine chemistry and specialty testing such as tumor markers, reproductive hormones, hepatitis testing, therapeutic drug monitoring, and infectious disease tests.

4. Histopathology/ Cytopathology

This provides diagnosis and study of the diseases of the tissues through examining tissues and/ or cells under a microscope. This is well offered in our lab under the above-mentioned sub-specialty. We also offer a complete range of services including Gynecologic and Non-Gynecologic Cytology, FNA biopsy interpretation, adequacy assessment and performance, and Consultation. This section is well equipped with state-of-the-art modern equipment, most of which are of the kind in the region.

Accuracy and precision of tests are maintained by strict internal quality assurance programme which is reviewed daily.

KUTRRH Laboratory also participates in External Quality Assurance programs to benchmark its quality against other leading laboratories nationally and globally.

The unit is working towards achieving ISO 15189:2012 accreditation.

Biomedical Engineering Department

Inception of Biomedical Engineering Department at KUTRRH

The inception of a biomedical engineering department at KUTRRH brought numerous benefits to patient care and hospital operations. Biomedical engineering is the application of engineering principles and techniques to healthcare, and it involves acquisition, installation, testing, commissioning, operations, maintenance, modifications/upgrading, decommissioning, of medical equipment/plants, and Instruments.

Some key steps that were taken to start a biomedical engineering department in KUTRRH were: Established a mission and goals: Defined the mission and goals of the department, including the services to provide, the equipment to maintain and the expertise offer to other hospital departments.

At the onset, the department had four qualified Biomedical Engineers & Biomedical Technologists who had the necessary expertise and experience to manage medical equipment and systems. After a few months, the number rose to 9 staff and then to the current number of three (3) Biomedical Engineers and ten (10) Biomedical Technologists.

Roles of Biomedical Engineering

Department Biomedical engineering Department plays a critical role in a hospital setting by utilizing the knowledge of engineering principles to manage biomedical equipment

Some of the roles include:

i) *Formulating and reviewing of policies, procedures, and guidelines in Biomedical Engineering.*

ii) *Providing technical advice/specifications on procurement of appropriate medical equipment and plants.*

iii) *Overseeing installation, testing, commissioning/decommissioning, medical equipment/plants, and instruments.*

iv) *Preparing and implementing Planned Preventive Maintenance (PPM) as per schedules.*

v) *Undertaking preventive maintenance and repairs of medical equipment, plants.*

vi) *Overseeing and monitoring all Service Level agreements on Biomedical Equipment and assist with promoting and implementing revenue programs.*

vii) *Taking/Maintaining and updating inventory of medical equipment, spare parts, plants, and instruments.*

viii) *Verifying medical equipment*

to ascertain quality and safety standards.

ix) *Maintain effective quality systems and programs compliant with ISO standard.*

x) *Testing, Analysis & Calibration of medical equipment.*

xi) *Monitoring medical engineering programs and projects.*

xii) *Training, coaching, and mentoring of staff and students on attachment.*

Milestones.

- Participated in installation, commissioning, training and management of imaging and cancer management equipment.

- Medical Oxygen management: While covid-19 cases fully depended on Oxygen therapy, Biomedical department played a vital role in operating the Medical Oxygen plant (PSA) and supplied sufficient medical oxygen to all clinical areas in the hospital (Bed side).

Some of our future advancement as a department include:

1. Commercialization of oxygen by supplying of medical oxygen to hospitals and the public
2. Establishing a Calibration center for internal and external medical equipment calibration services.

Research, Training & Innovation Complex

The Kenyatta University Teaching and Referral Hospital Training Institute for Specialized Nursing (TISN) is a tertiary institution accredited by the Nursing Council of Kenya (NCK) and was established in 2021. It opened its door to its first students in November 2021 to offer a higher diploma in specialized nursing.

The goal of the Institution is to provide outstanding education within the Kenyan system and produce highly qualified specialized nurses. The Institute provides a conducive environment for an education that enhances the nurses' academic and personal development by incorporating the highest level of academic knowledge with practical learning.

Our Programs

The Institute currently offers four courses in specialized Nursing:

- i. Oncology Nursing**
- ii. Critical Care Nursing.**
- iii. Perioperative Nursing**
- iv. Nephrology Nursing**

Our students are exposed to world class practical training using the facilities of the hospital. The hospital's state of the art medical equipment enhances practical competencies and learning experience of the students. Our Oncology students are the first

students to have a rotation within an Integrated Molecular Imaging Centre (IMIC) at KUTRRH which has the most modern equipment. Intakes at The School of Nursing are in September. However applications are open months before that.

4-Point Digital Transformation Agenda

Improved Citizen Experience

Paperless end-to-end patient journey HMIS (patient-care journey, HR services, support services (lab, imaging, pharmacy, billing, procurement and stores, financials...))

Toll free 24/7 Contact Centre

Mobile apps

24/7 HMIS/ICT Support for on-duty staff

Continued patient engagement (KUTRRH Connect)
Doctor's interaction with the patient care journey (Dr. KUTRRH) Employee services (KUTRRH Employee)
Management dashboards (KUTRRH MIS)

Stable Systems and Operations

High uptime setup

- Clustered servers
- Power backup
- Dual last-mile fiber backbone

Information security

- 24/7 CCTV surveillance
- Device security
- Controlled access to secure areas
- Network segmentation

ISO 27001 maintenance and continual improvement

Data Visibility

Supporting evidence-based:

- Quality patient-centered care
- Decision-making
- Training, research and innovation initiatives
- Management dashboards

Data management practices

- Data management policy
- Data privacy policy
- Implementation of Data Protection laws and regulations

Disruptive Innovation

Medical Innovation and Accelerator Hub (MIAH)

- Therapeutics
- Diagnostics
- Devices
- Equipment
- Healthcare procedures

Digital Solutions

- Digital Solutions
- Infusing the patient-care journey with a touch of excellence
- Discovering digital technologies, trends and value to healthcare

ICT/HMIS Services

Applications development and hosting

Includes analysis, design, development, testing and deployment of user applications (e.g., HMIS change requests and new solutions), content, survey forms...

Support, training and handholding

Includes online ICT/HMIS support, remote-desktop HMIS support, desk-side personalized training, face-to-face group training, online self-paced modules loading...

Managed print services

Includes setting up user accounts, strategic printer placement, print volume/cost/frequency analysis...

Security services

Includes desktop, laptop and mobile device management, access control cards/biometric setup, antivirus, port-mapping, incident analysis, business continuity and disaster recovery operations, emergency code (e.g., CODE BLUE) setup...

Digital assets management

Includes ICT asset inventory, information security valuation, risk assessment and security controls, repairs and maintenance, technology refreshment and staff exit clearance...

Identity and clock-in support services

Includes staff, student, visitor ID cards and car sticker issuance, setup of biometric clock-in system accounts...

Communication services

Includes telephones, cellphones, IPBX-mobile phone Linkus, emails, calendars, meeting room booking, Contact Center support, public address system services, TVs and digital display boards...

Data analytics, business intelligence and research support

Includes REDCap surveys and clinical trial setup, data extraction and organization, data visualization, general and specialized management dashboards...

Graphics, media and marketing materials

Includes design and development of content, marketing and communication materials, management of Hospital social media handles, photography services and related services.

Backup, storage, recovery and server setup

Includes storage (OneDrive, SharePoint, external drives, server), compression, backup, recovery, encryption, server hosting, virtual servers and databases...

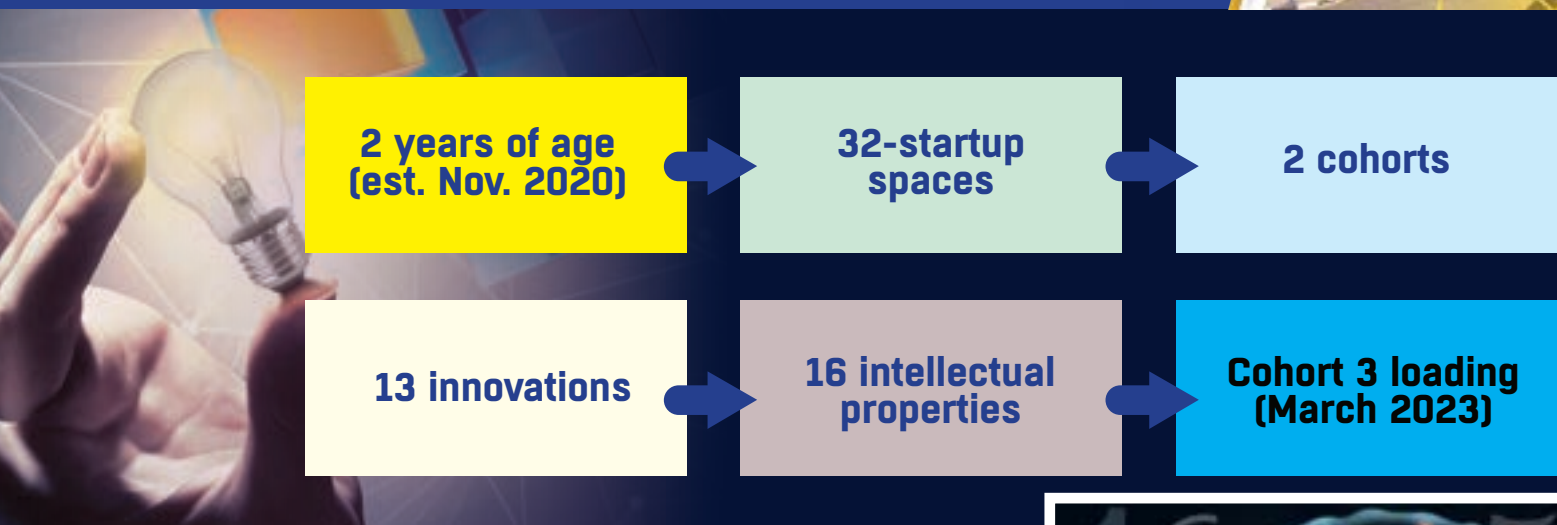

Training and capacity building support

Setting up new student's accounts (Moodle, email,...), setting up new training modules, support for CMEs and MDTs, developing specifications for digital equipment/systems...students information management system loading...

ICT infrastructure support

Setup/extension of structured cabling to new service points, provision of uninterrupted power supply, extension of core network backbone to new buildings, repairs and maintenance of core equipment and data center, PACS support, type approval of equipment, servicing/extension of Wi-Fi/eduroam accounts, engagement with external infrastructure support (e.g., KENET)...

Medical Innovation and Accelerator Hub

Disruptive innovation sits at the heart of Kenyatta University Teaching, Referral and Research Hospital (KUTRRH) in the vision of “a premier referral Hospital renowned for excellence in clinical care, training, research and innovation.”

Continual medical innovation is central to quality healthcare, locally and globally. The spirit of innovation and entrepreneurship espouses imagining new means to achieve new ends for quality healthcare. This core to the SDG goal of good health and well-being with the attendant potential to accelerate all other sustainable development goals.

The KUTRRH innovation agenda aligns with the Government’s Bottom-up Economic Transformation Agenda (BETA) by providing an avenue for acceleration novel medical ideas into medical products/services and startup

companies. The startup companies have the potential to grow jobs, wealth and national esteem with an improved ranking in the global innovation index. The Medical Innovation and Accelerator Hub (MIAH) is the first of its kind as a vehicle to accelerate medical solutions and startups.

MIAH focuses on the acceleration of diagnostics, therapeutics, medical devices, medical equipment, and health services. Novel ideas are spotted, vetted, admitted and incubated from among academia and research communities, industry and the general community. The Accelerator provides an ecosystem that brings onboard capacity and capability to drive ideas into healthcare to drive product development, business development, intellectual property protection, resource mobilization and other services relevant to stir up and nurture robust medical solutions and enterprises.

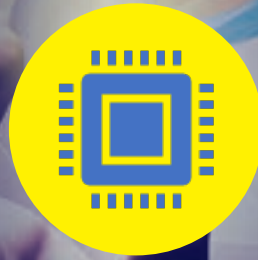

MIAH is making its contribution to the research to commercialization (R2C) agenda that has the potential to fast track the BETA agenda, lift the fortunes of the nation and contribute to attaining a “newly industrializing, middle-income country providing a high quality of life to all its citizens.”

Partnerships and Collaborations

Partnerships department is domiciled in the new directorate of Planning, Development and Partnerships. The philosophy behind the formation of this department was informed by the Hospital's realization that in order to achieve its overarching objective of enhancing the quality of lives for Kenyans and regional citizens, working in collaboration with other related and like-minded institutions is more effective than working in isolation.

To achieve this objective, the Department is tasked with the following mandates, which include but not limited to: Promote enhanced healthcare through establishing national, regional, and international partnerships and collaborations; Establish partnerships in medical research, training, and clinical practice; Soliciting of funds through grant writing, donor funding and joint projects and fundraising among others. The resultant impact of these responsibilities is to achieve KUTRRH's strategic goal of provision of innovative and evidence-based healthcare in the country and beyond.

To effectively execute this mandate, the Department focuses on six thematic areas: Service Level Agreements (SLAs), Training, Research and Grants; Equipment, power, and manufacturing; Marketing and International Partnerships.

Since the inception of the Department, it has achieved several milestones:

Signing of Service Level Agreements with various institutions whereby KUTRRH offers medical service to the staff and students of such institutions such as MPESA Foundation Academy, Windsor Golf Club Hotel, The Judicial Service Commission (JSC), Kenyatta University, Jomo Kenyatta University of Agriculture and Technology, The Kenya Defence Forces among others.

KUTRRH in collaboration with The University of Manchester and The Christie Foundation embarked on a KES 446 million NIHR Esophageal Cancer Research Grant.

KUTRRH Management with the World Health Organization team led by Adama Thiam, Head - Operations & Logistics WHO-AFRO.

Signing of several Memoranda of Understanding (MOUs) with various institutions in training in order to improve clinical outcomes: Kenyatta University, Jomo Kenyatta University of Agriculture and Technology (JKUAT), Mama Ngina University College, Presbyterian University of East Africa, Nairobi Women's Hospital College, AMREF International University, United States International University, Kenya Medical Training Centre (KMTCC) Machakos; Defence

Forces Training College, Karen Hospital Medical Training College, Higher Education Loans Board, Johnson and Johnson, The Aga Khan Hospital, MP Shah Hospital, Gatundu Level 5 Hospital, Dr Berezin Medical Institute (MIBS), Daktari Africa, Centre for International Health, World Health Organisation, Education and Biosecurity -Kenya; Kindred, Tech-Care for All, among others.

The department appreciates the fact that training is not just limited to staff but also to medical students who require to undertake medical rotations. To achieve this objective, the Hospital through the Partnerships department has an established collaboration with the Kenya Medical Practitioners and Dentists Board that offers medical internship. The Hospital operates over 30 specialised

Partnerships and Collaborations

KUTRRH CEO, Ahmed Dagane and the Governor, Garissa County, H.E. Nathif J. Adam, EGH sign an MoU between KUTRRH and Garissa County.

KUTRRH Research Team visited KEMRI headquarters on 17th January 2023 to discuss various areas on Grant Management.

clinics and sections from outpatient clinics, obstetrics and gynaecology to nuclear medicine, thus offering an extensive spectrum of practical knowledge to any medical intern. Further, KUTRRH runs an Institute of Specialised Nursing for which the department seeks partnerships with other medical institutions for clinical placement. In addition, the department has facilitated collaborations through which the Hospital serves as an examination centre for institutions offering sponsorships, scholarships and those running Continuous Medical Education.

The Hospital has further continued to pursue its strategic objective of decentralizing its services by establishing collaborations with Country Governments in a bid to share knowledge, skills, and expertise in the medical field as well as sharing some facilities and equipment especially in Cancer care. To this end, the Hospital has signed MOUs with nine counties and the Partnerships department has strategized to collaborate with the remainder of the Counties through signing of MOUs. The nine Counties include: Kiambu, Garissa, Kisumu, Mombasa, Kakamega, Isiolo, Embu, Nyeri, and Nyandarua.

Medicine is eclectic and keeps evolving with the times thus necessitating innovation as the adage goes. It is for this reason that the Hospital has a robust Research wing fit with a Medical Innovation and Acceleration Hub. The Partnerships Department actively supports the spirit of innovation and

entrepreneurship by facilitating joint research ventures and opportunities. At the moment, the Hospital has won a grant and is conducting a joint research in Oesophageal Cancer in collaboration with the University of Manchester and The Christie NHS Trust. The Partnerships Department is pursuing other collaborations in research.

Quality and efficient clinical outcomes can never be realized without efficient equipment. It's against this background that KUTRRH strives to engage the best Original Equipment Manufacturers (EOMs) to ensure the full continuum of specialised healthcare. The Hospital boasts of state-of-art-equipment through collaborations with OEM's such as Accuray, Philips, Varian, Mindray, GE, Medtronic and Angelica Medical Suppliers among others.

KUTRRH appreciates that best health outcomes require collaboration with like-minded institutions; both local and international. Further, the Hospital appreciates that financial support either in form of grants or donations are crucial in helping achieve the Universal Healthcare goal. Consequently, the Hospital has sought donations from The Manu Chandaria Foundation and The Sports, Arts and Development Fund (SASDF) in the expansion of the Cancer Centre. The Partnerships grants writing committee is continuously developing and sending out grants proposals to support research and innovation initiatives.

Moreover, the Partnerships

Department is leading discussions with Foreign Missions/Countries for collaborations in manufacturing including but not limited to Argentina (nuclear medicine), Belgium (Manufacturing of consumables, among others); Russia (nuclear medicine), among others. Establishing a manufacturing plant will be pivotal in supporting the Hospital's expansion as envisioned in the Strategic Plan through reliable supply of consumables and other crucial products.

In conclusion, the Partnerships Department is fully committed to support the Hospital in realizing its Vision: "To be a premier National Referral Hospital renowned for clinical excellence, medical training and research that enhances quality of lives for Kenyans and the regional citizens" and its

Mission: "To enhance quality of lives through provision of patient-centred and evidence-based health care, training, innovation and state-of-the-art technology".

This is based on the Department's triad philosophy of: TEAM: Together Everyone Achieves More;

Kaizen – Continuous Improvement and "Collaboration is the new Competition".

KUTRRH and NHIF Partnership

On 20th June 2022, the Ministry of Health and the National Hospital Insurance Fund (NHIF) signed a joint MoU with Roche pharmaceuticals towards the provision of affordable medication for breast cancer treatment. The joint MoU signing took place at Kenyatta University Teaching, Referral & Research Hospital. The event was graced by the then Health Principal Secretary, Ms. Susan Mochache. Through the MoU between NHIF and Roche Kenya Limited, breast cancer drugs will be provided by the global pharma at highly subsidized rates that will fit in the NHIF cancer care packages. This means that NHIF members will have all their treatment cycles without co-payment. The engagement also complements another initiative with the Ministry of Health on improving cancer screening and access to commodities. The then Health Principal Secretary, Ms. Susan Mochache lauded the contribution of various stakeholders led by the Head of State towards positive developments in the health sector. On the new collaboration, she noted that it is timely at a period the nation is facing an epidemiological crisis as it reels from the effects of the Covid-19 pandemic. Cancer care and the burden it has over the years placed on Kenyans has seen

adverse effects on the economic life as well as rise in cases of mental health. With over 42,000 cancer cases reported annually and nearly 27,000 fatalities from the same, breast cancer from her observations has been one of the lead contributors.

The then PS noted that the MOU aligns with the Kenya's universal health coverage agenda while providing innovative precision medicine at an affordable cost. The then PS further reiterated the need for concerted efforts on preventive health through adoption of healthy lifestyles, regular health screenings, and early diagnosis for non-communicable diseases. As part of these efforts, she lauded KUTRRH management for the Wellness Centre and the potential it holds in the early detection of NCDs and its favourable pricing within NHIF capitation rates. In her remarks during the ceremony, Roche Head of Government Affairs, Ms. Jackline Wambua noted that Roche pharmaceuticals has had a global footprint spanning over 125 years. She noted that through partnerships and collaborations, new innovations on precision medicine are brought to the access of all for improved health outcomes. She expressed her gratitude to the stakeholders for enabling access

to targeted therapy medication for breast cancer that shall be accessible for all.

NHIF CEO, Dr. Peter Kamunyo noted that the joint MoU is in line with reforms at the National Hospital Insurance Fund as outlined in the fund's new strategic and vision plan. From the fund's slogan; 'Afya Yangu Bila Stress', Kenyans under the Universal Health Coverage shall benefit from various health packages in renal, surgical and cancer care among others. From his remarks, the rebates for oncology services rose to about 4.58 billion in 2021 indicating the cost burden on Kenyans for cancer care. He further lauded developments at KUTRRH and noted the optimal utilization of technology and resources at the facility especially in cancer care. With KUTRRH setting up a center of excellence in Breast Cancer Care and Research, he noted that this is going to yield improved health outcomes from the array of interventions from the center.

KUTRRH and NHIF have several joint understandings all for the benefit of Kenyans, to seek diagnosis and treatment for various ailments at minimal or no cost.

KUTRRH and NHIF Partnership

Kenya's health financing model was adopted in 2017 when the Ministry of Health decided to use insurance as the preferred healthcare financing model. In line with this, the National Hospital Insurance Fund (NHIF) has been working tirelessly to prepare a contract that is consistent with achieving universal health coverage for all Kenyans. NHIF's new comprehensive contract was published in 2022, with the aim of providing universal health coverage to all citizens. KUTRRH is among the first hospitals in the country to sign up for the new contract, which will cover paediatrics, paediatric oncology, paediatric surgery, male surgical and male medical, female surgical, female medical, and maternity services.

The NHIF scheme will enable patients with an active NHIF card to enjoy a walk-in/walk-out system, where they can receive the necessary medical attention without worrying about the cost. KUTRRH has been working hard to ensure that the necessary infrastructure is available to provide patients with value for their money. The hospital's board and management are keen to achieve the vision of universal health coverage for all Kenyans.

To operationalize the NHIF scheme, KUTRRH has taken several measures to enhance service delivery. The hospital has invested in modern equipment and technology to provide efficient and effective healthcare services. Additionally, KUTRRH has increased the number of trained medical personnel, especially in critical areas such as pediatrics, oncology, and surgery. The hospital has also streamlined its administrative processes to ensure that patients receive timely and quality services.

The NHIF scheme is expected to have a significant impact on healthcare in Kenya, especially in rural areas where access to medical services is limited. By signing up for the NHIF comprehensive contract, KUTRRH is not only contributing to the realization of universal health coverage but also demonstrating its commitment to providing quality and affordable healthcare services to all Kenyans.

In conclusion, the NHIF scheme presents an excellent opportunity for Kenyans to access quality and affordable healthcare services. The signing of the NHIF comprehensive contract by KUTRRH is a significant milestone toward achieving universal health coverage in Kenya.

Collaboration Between KUTRRH and Gatundu L5 Hospital

Gatundu L5 Hospital is a County Referral Hospital located in Gatundu town, Gatundu South Sub-County within Kiambu County with a 300 bed capacity. Gatundu Hospital was started in 1966. Currently, the Hospital has a surgical theater, laboratory, dental services, x-ray, mortuary and other clinical health care services. It serves about 12,000 patients per month, mainly from within Kiambu County and adjacent Counties such as Murang'a, Nairobi, Nyandarua and Machakos.

A Memorandum of Understanding (MoU) was signed on 10th September 2020 between the Ministry of Health through Kenyatta University Teaching, Referral & Research Hospital and the County Government of Kiambu on collaboration in the management of Gatundu L5 Hospital. KUTRRH has thus been collaborating with Gatundu Hospital in delivery of quality health care and referral services. The areas of

collaboration are:

- 1) Provision of Health care service delivery and referral
- 2) Infrastructural development and modernization of equipment
- 3) Sharing of Human Resources for health (HRH)
- 4) Sharing and development of Health Products and Technology
- 5) Sharing of the Health Information and Management System
- 6) Training, Research, and Innovation
- 7) Leadership and Governance

The hospital has :

- Adequate washrooms
- A modern laundry
- A modern kitchen
- A solar water heating system
- Designated waiting bays
- Designated walkways

FUTURE PLANS

The following have been identified based on the needs assessment of

patients:

- a) Expansion of the dialysis unit
- b) Establishment of
 - an ENT & audiology centre
 - a burns unit and an ICU for burns patients
 - a central sterile supply department
 - a biomedical workshop
 - Rehabilitative services unit
 - Specialized clinics
 - Dental unit
 - Eye unit
 - Modern surgical theatre
- c) Construction of the following:
 - A standard laundry
 - A modern mortuary
 - Incinerator with an ash pit and a placenta pit
- d) Allocation of space for rehabilitative services (physiotherapy, plaster application, and occupational therapy).

Support Services

Additional support services and facilities aimed at supporting the KUTRRH fraternity are also Available. These include the Staff Quarters, Funeral Services, Research, Training & Innovation Complex, Laundry & Catering Services, Restaurants, Banks, Oxygen Manufacture Plant, Incinerator, Ambulance Services, Rehabilitation Shop, Central Stores and a Helipad.

Central Stores

This is a centralised storage unit that houses all the hospital supplies. Some of its unique features include:

- Adequate storage space for supplies to facilitate operations of the hospital.
- Temperature-controlled rooms to store drugs, and perishable products
- Unique linen storage cubicles to prevent dust, stains and damage.

Central Stores

Laundry Services

The Laundry Services Department supports the Housekeeping Department by cleaning of the hospital linen, and uniforms. The department is equipped with advanced laundry equipment given that the hospital handles delicate garments that need superior cleaning services.

Such equipment include:

- Sluicing machine for disinfection of garments
- Automatic detergent and disinfectant dousing equipment.
- Heavy-duty steam washing machines
- Automatic pressing and garment folding equipment.

Laundry Machines

Pressing Machine

Restaurant

To ensure staff and members of the public are well catered for, the Hospital has two restaurants. Each of the restaurants can serve up to 120 patrons at any given moment. The restaurants have a well-equipped kitchen and qualified staff that serve quality meals. Moreover, the staff are trained and experienced in food and beverage production and service as well as food safety standards.

Food is the ultimate medicine; having the right relationship with food will bring a positive impact to your health!

Kitchen

Food and nutrition play an essential role in the recovery of patients. To ensure proper nutrition is given to all patients, KUTRRH has a kitchen that is used to prepare meals for patients in the wards. The kitchen is Hazard Analysis Critical Control Points (HACCP) compliant and adheres to the highest health standards starting from storage, to production and service. It has state-of-the-art equipment that enhances the speed of production as well as quality and safety of the food. Quality control checks and measures are also in place to ensure the safety of food and beverages served.

A multidisciplinary team inspects food supplies to ensure safety and quality. The kitchen has the capacity for mass production to cater for up to 3000 individuals in one production shift.

The Nutrition Department ensures that the food served meets the dietary needs of the patients, staff, and the general

public. There is also a separate, fully equipped diet kitchen area to cater to patients with special nutritional needs. Besides

that, all pastries are produced in house to ensure safety and dietary requirements are met.

Boiler Plant

The purpose of the boiler plant is to supply various sections of the hospital with hot water, clean water and steam for different purposes. To achieve this, the hospital has two boilers, each with five-tonne capacity. The boiler serves the following purposes:

- Supplies the laundry plant with steam for cleaning and pressing.
- Supplies steam to the CSSD for sterilisation of hospital and theatre equipment.
- Supplies hot water to the kitchen and wards

Boiler Plant

Incinerator

The incinerator helps to manage the general and biomedical waste safely and effectively. The waste is segregated at the source using the standard waste segregation protocols and then delivered to the incinerator. The incinerator renders the waste non-toxic, non-hazardous, non-putrescible and reduces the volume of material for ultimate disposal.

Incinerator

The Medical Gases Plant

The oxygen manufacturing plant at KUTRRH is one of its kind facility that caters to the critical need of oxygen within the hospital and beyond. The plant has the capacity to meet the hospital demand for oxygen which would have otherwise been bought from the market, thus reducing operational costs. It can also supply other surrounding hospitals at an affordable cost. Features of the plant include:

- A vacuum unit,
- A medical air facility for theatre use,
- An oxygen manifold (cylinders refilling unit) that can simultaneously refill 20 cylinders.

Oxygen and medical air are critical

Refilling Unit

in hospital operations, especially in clinical care for the critically ill patients. Reliable oxygen supply is critical in emergency care critical care as well as in theatres.

The plant is therefore, a key component in improving health outcomes at the hospital.

Community Outreach

KUTRRH Board Chairperson, Prof. Olive Mugenda cuts a cake during the World Kidney Day celebrations at the hospital grounds on 10th March 2023.

KUTRRH CEO, Ahmed Dagane leads a tree planting exercise in observance of the World Environmental Health Day 2022.

KUTRRH CEO, Ahmed Dagane giving a speech during the World AIDS Day outreach held at Kahawa West Market.

Enquiries at the KUTRRH stand during the 22nd MedExpo Africa 2022 held at Sarit Centre. The Expo brought together public, healthcare providers and dealers in medical and healthcare products.

KUTRRH staff conduct a community road safety training.

A specialist attends to a patient during an Ear Screening and Surgical camp, in collaboration with Operation Eardrop Kenya at KUTRRH

KUTRRH Medic conducted screenings at Afya House during The World ENT. Day celebrations.

Deputy director ICT & Innovation, Dr. Mwirigi Kiula leads the KUTRRH ICT team in a tree planting exercise.

KUTRRH STRATEGIC DIRECTION [2020 - 2025]

Healthcare is an ever-changing industry; an aspect that makes planning for the future a necessity for any healthcare practice to achieve lasting success. By planning for the unknown, organizations in the healthcare field can be better equipped for whatever may come along down the road. Strategic planning is therefore, essential for any hospital or health system looking to succeed not only in the short run but long term as well.

KUTRRH recognizes the critical role it has to play in the achievement of the global, regional and national Health Agenda through the provision of quality patient-centred and specialized health care, training, research and innovation. The Hospital is poised to become a medical hub that will play a critical role in enhancing the quality of life for Kenyans and regional citizens. It is with this in mind that the Board embarked on a journey of developing a 10 Year Strategic Plan. The process of development entailed formulating the mission and vision of where the Hospital intends to be in short and long-term, setting goals and objectives and coming up with a plan to achieve these objectives.

The plan took into consideration Government Policies on Health Care, including Vision 2030 and Universal Healthcare Coverage, technological advancements and economic trends that could impact on the Hospital's operations.

Some of the flagship projects in the plan include:

Completed and Ongoing Projects/Programmes

- Operationalisation of the Hospital
- Construction and operationalization of Integrated Molecular Imaging Centre.
- Construction of IMIC Hospitality Centre
- Installation of Cyberknife for advanced and precision treatment of cancer
- Establishment of Institute for Training Specialised Health Professionals
- Establishment of Medical Innovation Hub

Ongoing Projects/Programmes

- Expansion of the Cancer Centre
- Recruitment and retaining personnel with the highest skills and expertise in the medical field and other support services.
- Medical Training and Education through collaboration with Universities and other tertiary institutions
- Scaling up research in healthcare and clinical trials
- Certification and accreditation to international standards

Planned/Future Projects

- Construction of Children's Hospital
- Construction of Women's Hospital
- Expansion of the Hospital from 650 beds to 1500 beds
- Construction of manufacturing plant for non-pharmaceuticals
- Construction of staff houses
- Construction of students hostels
- Establishment of Center of Excellence for Breast Cancer

Integrated Molecular Imaging Centre (IMIC)

The Integrated Molecular Imaging Centre (IMIC) is the first one in a public healthcare facility in Kenya and sub-Saharan Africa. Kenyatta University, Teaching, Referral & Research Hospital (KUTRRH) prides itself as a leader in the provision of comprehensive care to the many cancer patients in the region. KUTRRH will now be able to offer a continuum of care in oncology.

The Integrated Molecular Imaging Centre (IMIC) is a unique facility for the early diagnosis of cancer. The Centre aims to bridge the gap existing today where patients are being diagnosed late with stage 3 and 4 cancers therefore reducing their chances of survival.

Through early diagnosis and

staging, IMIC aims to improve the survival rate of cancer in Kenya. The annual incidence of cancer in Kenya is about 28,000 new cases with an annual mortality of 22,000 cases.

This means that 78.5% of

cancer victims do not survive.

If caught in the initial stages, most cancers can be treated easier and often can be cured. Further through the state-of-the-art diagnostic equipment found at IMIC.

Diagnostic Equipment

CYCLOTRON

The cyclotron is a complex machine that produces consumables called Radioisotopes which are injected into the body to detect cancer cells using a PET-CT machine. The Cyclotron at KUTRRH is the first in a public institution and largest in Kenya and Sub-Saharan Africa.

256 SLICE CT

KUTRRH has a slice 256 Slice CT which is a more powerful diagnostic tool than its 126 Slice CT counterpart. The 256 slice CT takes super-fast 3D pictures which provide more details of

organs enabling experts to detect the earliest stages of diseases.

SPECT-CT

SPECT-CT combines pictures from a SPECT scanner and a CT Scanner to provide precise information about how various parts of the body are working and identification of problems clear.

PET-CT

A PET-CT is an advanced machine for early detection of Cancer that combines both PET and CT scanners in a single

gantry resulting in more precise information and accurate diagnosis.

3T MRI

In addition to the existing 1.5 Tesla Magnetic Resonance Imaging (1.5T MRI), KUTRRH also has a 3T MRI that uses radio waves and a powerful magnet linked to a computer to make detailed pictures of areas inside the body. These pictures show the difference between normal and abnormal tissue.

Integrated Molecular Imaging Centre (IMIC)

Cyberknife

This is a painless, non-invasive treatment that delivers high doses of precise targeted radiation. Recovery is often immediate with minimal risk of complications and damage to healthy tissue. The Cyberknife treatment will be fully covered by NHIF.

The new Cyberknife is a system that delivers non-invasive, robotic radiation therapy to cancerous and

non-cancerous tumors. Owing to its precise treatment with sub-millimeter accuracy, it is globally acclaimed as the best treatment for brain tumors, lung cancer, prostate cancer, meningiomas, and vascular malfunctions, among others. It works by delivering high-precision radiotherapy to sub-millimeter accuracies, incorporating its robotic arm and 3D computerized

imaging technique to achieve this. The cutting-edge treatment has a fully integrated planning system which enables the user to perform image fusion, dose and treatment efficiency optimization, dose calculation, and plan evaluation. Furthermore, unlike traditional surgery, there is no excision, and the treatment is often delivered in a single session.

Brachytherapy

Also called internal radiation, Brachytherapy is a form of Radiotherapy treatment where the source of radiation is placed on or inside the area with Cancer cells to kill them. It has fewer side effects than external beams of radiation and requires a shorter treatment time.

Linac

A LINAC machine is a device most used for external beam radiation treatment for patients with cancer. It delivers high-energy x-rays or electrons to the region of the patient's tumor. It customizes high energy x-rays or electrons to conform to a tumor's shape and destroy cancer cells while sparing the surrounding normal tissue. It features several built-in safety measures to ensure that it will not deliver a higher dose than prescribed.

Preventive health check-up is very useful in the early detection of various illnesses and risk factors. The Wellness Centre at KUTRRH offers a one-stop solution to health screening needs and early detection and management of diseases.

The team of highly qualified doctors perform the initial work up and evaluation during the follow-up.

KUTRRH Hospitality Center

Travelling for medical care can be very daunting, particularly when it means leaving your family and support system and finding accommodation in a strange city or even country. However, as KUTRRH opens the IMIC, the Hospital has factored all patients, wherever they may be travelling from.

With the opening of the IMIC Hospitality Center, patients from Kenya and Sub-Saharan Africa will have the opportunity to access quality medical care without having to worry about accommodation. The Hospitality Center features a variety of beautiful rooms that include, Lobby rooms, Single rooms, Double rooms, Mini suites (which accommodate two people), and Two-bedroom apartments (that accommodate up to five people). In addition to the rooms, the Hospitality Center also features a restaurant and a fully equipped gym.

The Proposed Public Children's Hospital

The idea of having a Children's & Women's Hospital was born out of the need to provide specialised medical care, training and research within Kenya and beyond. This is in line with the fact that Kenya is in short supply of medical personnel as well as facilities that can specialise on children's and women's needs. As a transformative leader, the then Vice-Chancellor of Kenyatta University, Prof. Olive Mugenda, conceptualised the establishment of a specialised medical facility that would fill the gaps in health care in Kenya. The vision was to establish a centre of excellence in the provision of highly specialised care that will reduce the burden of disease on Kenyans, reduce outward medical tourism and attract medical patients from other countries. It is from this vision that Prof. Mugenda advocated for the establishment of the main Teaching, referral and Research Hospital that would be supplemented by a purely

Artistic Impressions of the Proposed children hospital

Public Children's Hospital as well as a Specialised Public Women Hospital. The goal is to have a

cluster of health facilities that will offer quality patient-centred care.
